DID YOU KNOW THAT INDIAN STUDENTS BUILT SATELLITES?

146,934 likes

Parikshit Think students just cram for exams? Try building satellites and launching them into orbit. w

Indian college teams have been doing exactly that, and they're not done yet. Swipe for proof. 🚀

Individual post images

ANUSAT – India's First Student Satellite

🎓 BUILT BY: Anna University

🚀 LAUNCHED BY: ISRO (PSLV-C12)

📡 MISSION:

Stored and forwarded data - think of it like a flying USB stick for space.

🎯 WHY IT MATTERS:

The first Indian student satellite ever.
Designed completely by a university -
ground station included.

2009

STUDSAT – 7 Colleges, 1 Satellite

🎓 BUILT BY: A collab of 7 engineering colleges

🚀 LAUNCHED BY: ISRO (PSLV-C15)

📡 MISSION:

Take low-res Earth images, inspire students to aim sky-high.

🎯 WHY IT MATTERS:

First Indian pico-satellite - less than 1 kg!

And yep, they're working on STUDSAT-2 too 🛠️

2010

🚀 JUGNU — IIT Kanpur's Tiny Tech Marvel

🏆 BUILT BY: IIT Kanpur

🚀 LAUNCHED BY: ISRO (PSLV-C18)

📡 MISSION:

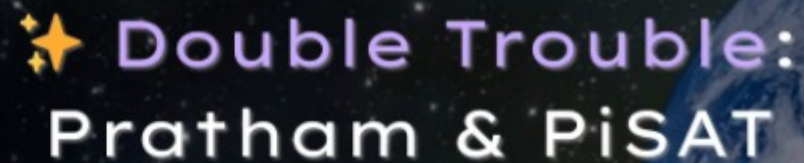

Used GPS, took pictures, tested tiny tech (MEMS sensors).

🎯 WHY IT MATTERS:

Weighs just 3 kg - but handled real science.

MEMS = Micro Electro Mechanical Systems. Aka: high-tech in a tiny box.

2011

🌟 Double Trouble: Pratham & PiSAT

🏆 PRATHAM (IIT Bombay)

📡 MISSION: Measure electrons in Earth's upper atmosphere

🚀 PSLV-C35

🏠 PiSAT (PES University)

📡 MISSION: Earth imaging with 80m resolution

🚀 Same rocket ride as Pratham!

🎯 WHY IT MATTERS:

Two student satellites launched together. One studied space, the other watched Earth.

2016

A detailed view of the INSPIREsat-1 satellite components, showing various electronic modules, wiring, and structural elements. The components are arranged in a complex, layered fashion, with some parts having green and yellow protective covers.

INSPIREsat-1 — India + the World

 BUILT BY: IIST students + collab with
USA, Taiwan & Singapore

 LAUNCHED BY: ISRO (PSLV-C52)

 MISSION:
Study space weather & the ionosphere.
Basically, how the Sun messes with our
atmosphere.

 WHY IT MATTERS:
Global project. Indian students helped
lead it.
And they even operated it from their
own ground station!

2022

A satellite view of Earth, showing a large portion of the Indian subcontinent and surrounding oceans. The image is dark, with the landmasses appearing in shades of green and brown against the deep blue of the oceans.

THIS IS JUST THE BEGINNING

In labs, hostels, workshops, and Zoom calls -
students are working on the next generation
of satellites.

They're teaming up with ISRO, launching from
private rockets,
and dreaming of missions to space that
weren't possible ten years ago.

These aren't just college projects anymore.
They're real. They're flying. **And they're just
getting started.**
